

# DynaFlow 5160 MIC

## heavy truck interior applications

DynaFlow 5160 is a molded in color material that was developed for Heavy Truck interior applications. This material is a cost savings from the incumbent PC/ASA materials that have been used for these applications. This product has similar shrinkage to PC/ASA and most times can be used in existing tooling with little to no modifications. This product has improved scratch and mar resistance and the natural dead sound characteristics of olefinic materials helps reduce squeak and rattle.

## key material advantages

- Scratch and Mar Resistance
- Stiffness/Impact Balance
- Similar Shrinkage to Engineering Alloy Equivalents
- Chemical Resistance
- Weatherability
- Low CLTE
- Reduced Noise
- Recyclable
- Does Not Need to be Dried
